RE: **Product Information – Stage DEX**

Dear Prolyte Customer,

We would like to inform you that we have successfully introduced a new production method for our Stage DEX products.

As a result of this, the Stage DEX frames, which up to now had a bolted corner connection, will in the future be welded and the design has been changed accordingly.

The newly produced Stage DEX have been thoroughly tested before being released into the market.

This new production method does NOT have any consequences for the user:

- The loading capacity is 750kg/m²
- The welded leg fitting has the same horizontal load resistance
- There are no visual differences on the outside of the Stage DEX frames
- There are no difference in the use or assembly of the Stage DEX

The welded Stage DEX will be available from approx. 20 July 2009 onwards.
The prices for the Stage DEX are unchanged.

If so required, a sample of the new Stage DEX is available on request.

For more information regarding the Stage DEX, please contact our Customer Sales department at cs@prolyte.com.

If you have any further questions, please feel free to contact me.

Trusting to have informed you sufficiently,

Kind Regards,

Prolyte Products Group,

Marina Prak
Communications & Marketing Manager

The new welded Stage DEX
