Prolyte Gold Finish Truss

Glossy, Shiny, Sexy

In response to market demands, Prolyte has developed a special finish for her standard trusses. A limited edition of truss is now available in a fashionable, extravagant gold finish. The special gold finish gives the truss an exclusive and stylish lustre thereby enhancing the decorative features and possibilities of the truss. Imagine the exclusivity Gold Finish truss can add to your event, exhibition or presentation.

Pimp your truss

The Prolyte Gold Finish truss is not just a truss with a simple gold paint. The trusses undergo a special manufacturing process to become suitable for the brass plate procedure. To obtain the definite gold finish, the truss undergoes a procedure in no less than 7 steps, whereby the gilding is applied by dipping the truss in a special finish.

The truss retains all its features and normal loading capacity, but has become a decorative element by itself. You can assemble the truss by using the normal coupling system in combination with a special gold finish spigot pin and R-spring.

Stay-put long lasting gloss

As the truss should be suitable to do its job as construction element as well, the Gold Finish Truss is as sturdy as any Prolyte truss. The Gold finish is hardened and specially developed to stick to the truss no matter the circumstances. Although we recommend to protect the Gold Finish truss from severe handling conditions by special packaging or transport protection if you want to keep its gloss intact.

Gold Finish truss is available for the following truss types:

- X and H series 30 Ladder truss from 29 cm to a max. of 2 m. length
- X and H series 30 Triangular truss from 29 cm to a max. of 2 m. length
- All 2-way Corners for X/H30L and X/H30 D truss (C003, C007, C016, C017)
- Base plates for X/H30 truss
- Spigot pin CCS6-603
- Aluminium end-cap ACC-512
- Tubes in 48 and 51 mm. to a max. of 2 m. length
